

PROVIDER DATA Analysis CLEANSING

Scrub every single data attribute

goperspecta.com

Ready. Set. Go Perspecta.

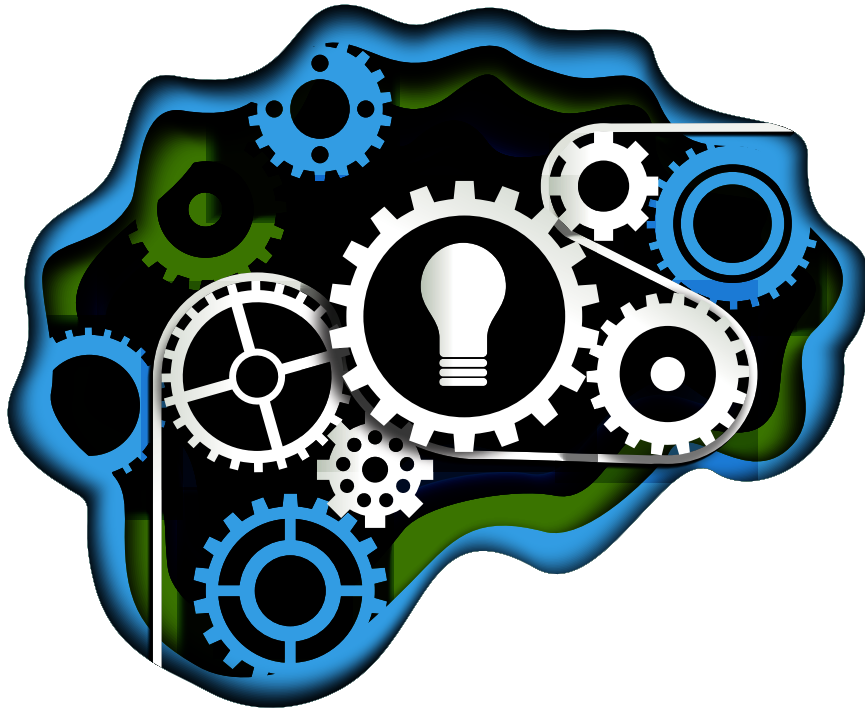

Provider practices spend more than \$2.7 billion and health plans spend more than \$2 billion annually on inefficient and redundant work to ensure accuracy of directory data.

SURVIVING THE COST TSUNAMI OF PROVIDER DATA CLEANSING

Navigating in the sea of disparate provider data is a tumultuous, tedious, and resource reliant endeavor. With data existing in conflicting formats and fragmented attributes, and across various applications within your organization and partners, how do you efficiently transform, cleanse, standardize, and reconcile provider data effectively?

For many healthcare organizations, cleansing provider data is like commanding a paper boat in a tsunami of costs.

Inaccurate data poses unnecessary obstacles for consumers, providers, health plans, and partners who need access to reliable provider information.

AI-POWERED PROVIDER DATA RELIABILITY AT EVERY ATTRIBUTE LEVEL

- 1.** We start the data cleansing process by **benchmarking** the current state of your provider information. Using our smart analytics solution, Data Scorecard, we score your provider network data to pinpoint inconsistencies, duplicates, and errors.

- 2.** Our **AI-enabled data profiling** automates the identification of metadata and provides data matching right down to the single attribute level. Artificial Intelligence helps to ensure comprehensive data cleansing by mapping data from source to transformation, and final destination.

- 3.** We understand that provider data is a critical part of your business. We have **unrivalled expertise**

and experience to control costs and manage the challenges you face. We can take on the workload, helping you reduce costs and free up internal resources to focus on other areas of your business.

- 4.** The result is **continuously cleansed enterprise data** that can be accessed for integration, reporting, and analyses across your organization and regulatory environment.

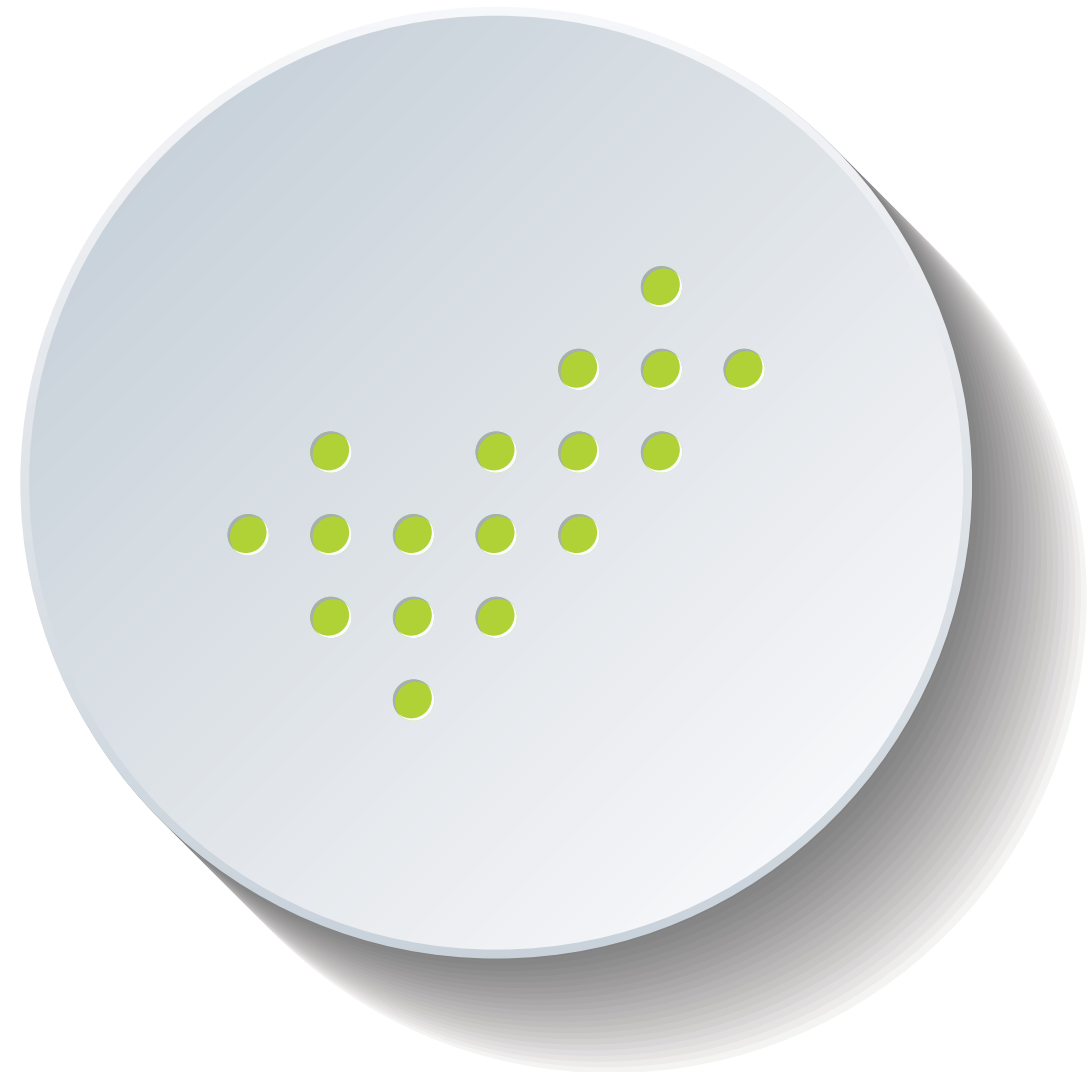

WHAT'S YOUR DATA SCORE?

SMART DATA
BENCHMARKING

CHECK. CLEANSE. CHECK AGAIN.

Our cleansing workflow includes quality checks within the information flow to monitor and correct errors. AI-powered transformation, validation, and transport ensures data integrity. A final check and scoring of your data helps to establish a higher benchmark for accuracy moving forward.
